Bracket gives you the most secure and easy to use encrypted email... now <u>with file transfer.</u>

Email encryption has always been a pain to use. You had to create an account, download and install an app or plugin, open the app, sign in, and finally create and send your message. Bracket makes it so much easier! There's nothing to install or maintain. Email is encrypted from any client on any device, by wrapping the [subject] in brackets. Plus, with Bracket Share (included) you can safely send and receive files up to 1GB effortlessly.

High Security
Encrypted using AES-256 standards & geographically distributed keys.

Fewer support tickets
No more lost passwords! Fool-proof sign-in mails you a secure, expiring link.
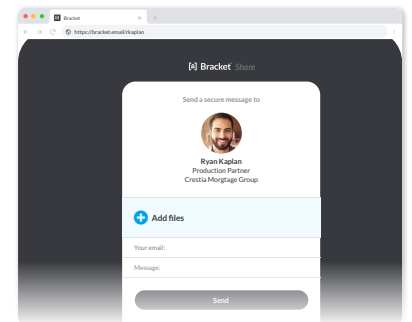

Unrivaled flexibility
Send encrypted email and safely transfer files from any email app or web browser.

Just [bracket] to encrypt... it's really that simple

Bracket's **patented** email encryption really is the easiest and safest way to keep your sensitive emails secure and compliant with stringent industry standards requirements such as HIPPA. There's absolutely nothing to install, and as soon as it's activated any user can immediately send encrypted messages by bracketing the subject. It just works.

Includes Bracket Share for Secure File Transfer

Bracket Share gives every Bracket user their own personalized **file transfer** page with an easy URL (Share link) they can give to anyone. As many as 20 1 GB files can be shared at once! When files are uploaded and ready to send, the sender is validated via inbox authentication to prevent abuse. Once sent, shared files and messages show up in the Bracket inbox and the recipient is notified just like a regular Bracket email.

FEATURES

- Multi-layer AES-256 Encryption
- 1GB secure, custom file transfer
- Encrypted from end to end
- Meets health/legal compliance

- Cloud-based... nothing to install
- Intuitive and easy to use
- Works on any client, OS or device
- Password-free sign in

- Two-Factor Authentication
- Message Recall
- Customizable profile
- *And much more...*

Cloud-based email security that filters spam, viruses, phishing attacks and beyond.

Spam and malware are here to stay. Email-based threats to organizations and individuals continue to grow increasingly sophisticated as spammers innovate new tactics for evading spam and virus filtration systems. CloudFilter™ stops the junk and lets the good email through. Messages containing offensive, harmful, or policy violating content are held for user review, while good messages continue on their way.

Accurate filtering
Icon-based scoring indicators to clearly communicate various levels of safety.

Detailed analytics
Quickly see why an email was held and determine if the sender is trustworthy.

Powerful policy enforcement
Build and customize rules manually from templates, or through regular expressions.

A massive upgrade for Microsoft 365 security

CloudFilter handles M365 email more intelligently so there are less false-positives. Users can preview held mail so important messages don't get buried. Plus, they can see clear **message analytics** and security details, so they're 100% sure it's safe to release to their inbox.

Only get the messages you want

CloudFilter allows for **granular control** of the content and message quality that's either blocked or allowed for both individual users and larger groups as well. Users can also add an address to their list of allowed or blocked senders from th message preview ion one simple step. CloudFilter helps ensure that everyone receives only the email they want in their inbox.

- Custom content rules
- Attempts delivery for 24 hours
- Hassle-free user sync

- Activity logging
- Adjust settings per user or globally
- Manager role delegation
- *And much more...*

SafeSend™ adds powerful compliance options to your outgoing email filtering.

Much of the email security industry today focuses on inbound email threat protection, and many companies imprudently downplay the importance of adding protection from email threats and abuse within the organization. SafeSend™ provides this vital layer of protection, allowing you to protect your company's reputation and preventing sensitive information from being leaked via email.

Enforce sending policies
If a bad email is sent, SafeSend stops it and notifies the sender of the violation.

Block sensitive attachment sending
Prevent sensitive information or file leaks from slipping out under the radar.

Protects reputation
Prevent embarassing spam from being sent from within your organization.

Instant blocking notifications

If someone tries to send an email that violates company policy or contains malicious content, SafeSend will block the email and immediately notify them that the message was held. If the administrator permissions allow it, they can **easily release** the email for delivery with a single click.
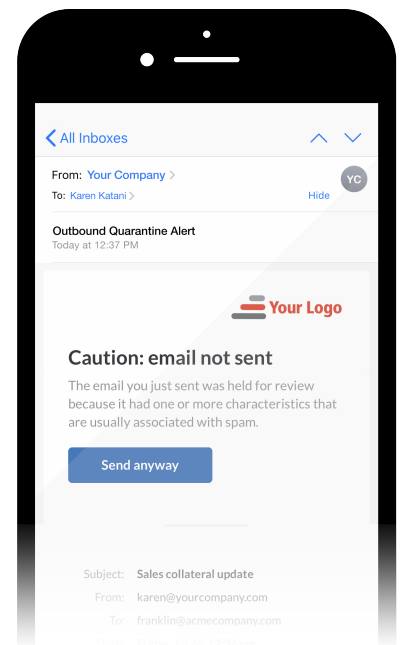

Policy-based compliance

SafeSend gives administrators the ability to **define which content is not permitted** for email distribution. Utilize pre-defined content lexicons to secure data such as Social Security or credit card numbers, or create custom rules to cover your specific policies or legal compliance needs. SafeSend even lets you benefit from the flexibility of regular expressions to create custom content rules that help you stay compliant.

XtraMail™ provides affordable, disaster recovery with shadow inboxes.

Normally when email goes down vital conversations are abruptly cut off. Without a continuity plan, your users have no choice but to sit and wait until normal email functionality is restored. Thankfully there's an easy, affordable solution for those emergency situations. XtraMail™ is the always-on email service that gives your organization a rock-solid business continuity plan.

Low cost
Offer your customers peace of mind for an amazing price that won't turn them away.

Always on and accessible
There's nothing to activate during an outage, so you get zero-delay continuity.

30-day backup
Sent and received email is backed up and stored for a month before being purged.

Like a spare tire for your email

Email outages can leave users stranded until the cause of the problem is resolved. Productivity comes to a screeching halt and the potential for missed opportunities is high. XtraMail combats this by storing a rolling **30 day email backup**. Users can login to webmail and keep working without skipping a beat.

Nothing to turn on... sign in any time day or night

XtraMail works by routing a copy of all sent and recieved email that can be accessed via webmail. Users can sign in to view their mail securely from **any web browser** (desktop or mobile) at any time, even if their regular email systems are working properly. Once XtraMail is enabled, there's nothing to activate during an outage. XtraMail is always working behind the scenes to ensure seamless continuity.

FEATURES

- Back up 30 days sent/received email
- Affordable reduncancy
- Mobile-friendly webmail
- 24/7 access to mail

- Filtered for spam, malware, phishing
- Eases administrator burdens
- Quick and easy user setup
- Nothing to switch on and off

- Keep mail up during outages
- No bounced email due to outage
- No disruption during maintenance
- *And much more...*

CloudMail™ is budget-friendly email hosting that has everything business users need.

Not all users need the bells and whistles offered from the big email hosting providers like M365 and Google, so we've created an affordable option that includes the features vital to most businesses while keeping costs low. CloudMail™ provides affordable 25GB hosted email, contacts & calendars. It's easy to split your domains, so the users that need more services can use those, while the users who just need the basics use CloudMail.

Email security Included
Security is seamlessly integrated so there's nothing to install or maintain.

Massive 25GB mailboxes
You'll never have to worry about your inbox size. No more "inbox full" messages!

Flexible access options
Email with your preferred email client via POP3/IMAP, or in our webmail console.

All the email essentials business users need

Keep up with your inbox through our convenient webmail, or in any email client via POP3/SMTP syncing. CloudMail is filtered for spam, virues, phishing attacks, and more, so your people are **protected** from the latest email-based threats. Contacts and Calendar features are included, with full CardDav/CalDav support for syncing.

Save money with split-domains

Not everyone needs all the features of Microsoft 365 or Google Workspace, so you can utilize CloudMail to you split domains into groups. People who email a lot can keep using the more expensive email host, but those who don't use it as much (factory floor workers, temps, interns, etc.) can be split into their own group and put on CloudMail. It's one great way that Mailprotector helps you work **more efficiently while saving money**.

FEATURES

- Affordable hosting option
- Access via webmail
- Filtered for spam and viruses
- Held Mail reporting

- Address forwarding
- POP3/IMAP Syncing
- 25 MB Mailboxes
- Contacts synced via CardDAV

- Calendar support via CalDAV
- Optimized for all devices
- Hybrid accounts lower cost
- *And much more...*

Email Archiving with unlimited storage and retention at an affordable and predictable cost.

Tap in to the power of a secure, state-of-the-art archiving platform to effectively preserve data, protect intellectual property, comply with data retention regulations, address discovery requests and cut IT costs. When combined with our full suite of email security and management services, SecureStore rounds out a comprehensive business-class email solution.

Affordable
Saves money from the start with no hardware or software to install/maintain

Quick deployment
We've streamlined the setup process, so you're good to go in 20 minutes or less

Easy to use
The intuitive interface is a snap to get around with fast, accurate, reliable search

Preserve and safeguard your data

SecureStore's Email Archiving solution helps organizations efficiently store, safeguard, manage, and discover data from most email systems through Journaling. eDiscovery, Retention and Legal Hold policies and Compliance Review are just a few items that make SecureStore Email Archiving **a strong tool** for your archiving and compliance needs. Lightning-fast search offers 20+ search criteria, no limitations of timeouts and advanced search tools with reusable saved search and email alerts.

Maintain compliance

Regulated by PCI, SEC, GLBA, HIPAA, HITECH, SOX? You're covered. SecureStore provides an easy-to-access archive of ESI, to comply with even the most stringent government mandates, industry regulations and corporate policies.

FEATURES
